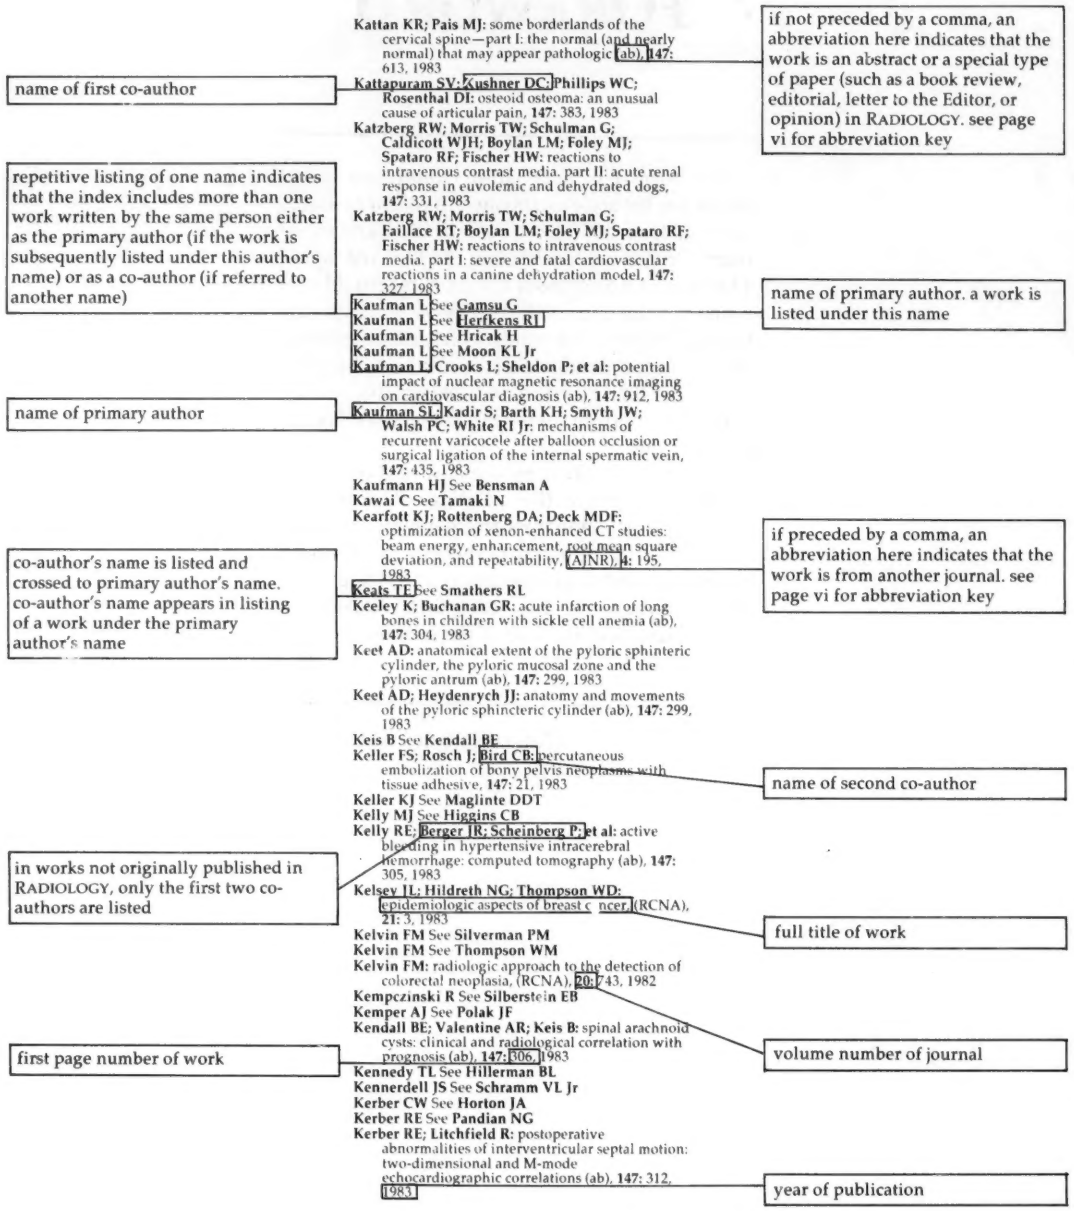
FOREWORD



The format of this latest cumulative index continues the style established in recent editions. Listings from 1979 have been deleted and those from 1984 added to maintain the five-year span. The index encompasses the most recent 20 volumes of *Radiology*, including book reviews, editorials, letters to the editor, obituaries, opinions, special reports, and abstracts of selected papers from more than 85 other medical journals, and the major papers from seven additional radiological publications.

The index evolves by the addition of appropriate new terms, the deletion of outmoded terms, and occasional rearrangements. The editorial staff tries to identify those terms that will be most useful to physicians and to strike a balance between the most complete indexing of manuscripts and the size of the edition.
